Screenshot by Topher Kessler/CNET With all of these options, you will connect as usual using File Sharing, so first be sure this is enabled in the Sharing pane of System Preferences, and that the appropriate users are given access to resources on your system.. Most of the connection options available will still use file sharing, with the exception that you make use of faster ports on your Mac.

DIY Repair Liquid Damage A1466 MacBook Air 13' Logic Board - No Power Efi Chip - Duration: 34:51.. Enable File Sharing on at least one of the systems you are transferring files to or from.. To do this you might consider simply enabling file sharing on one of the systems, and then connecting to it from the second computer over whatever network connection you are currently using; however, in doing so you may end up using a relatively slow Wi-Fi connection that could take hours to complete, when with a small amount of effort you can transfer the data in a fraction of the time.. In that case, you can make use of up to three other supported options that should be available on most Mac systems.

Fix Apple Now 119,766 views A file copy, on the other hand, copies data file by file, and while the file data remains the same, the location of the file on the source and destination devices will likely be very different.. If you need to transfer a file or two from one Mac to another, you may use a service like Dropbox, or copy them to a USB drive and move them manually; however, there are some built-in options that can be substantially faster, especially if you are transferring large amounts of data up to numerous gigabytes.
